Anvil Hack III

A creative hackathon by Hacksmiths

BECOME AN ANVIL HACK SPONSOR

Hacksmiths is the the tech society at **Goldsmiths University of London**, and we are holding a creative hackathon on the weekend of the 22nd - 23rd April 2017, and we want you to be involved..

Our hackathon is focussed on the creative applications of technology taking place at a centre of creative computing research. We want to encourage hackers to make something wonderful, arty, musical and just plain weird.

This year we have the privilege of using our brand new fabrication lab built right into the venue. Hackers will have access to state of the art equipment just a couple of months after it's been installed. This includes 3D printers, CNC machines and laser cutters. Exciting!

As a society we run several large hackathons every year, including an accessibility hackathon (Hackcess), Sex Tech Hack, Global Game Jam, and our flagship - Anvil Hack.

We can't do it without your support!

WHY YOU SHOULD SPONSOR US?

Goldsmiths has a reputation as a very creative university, with alumni including Damon Albarn, Damien Hirst, Sam Taylor Johnson, and (maybe, some records were destroyed) Alfred Hitchcock. This creativity has leaked over into the computing department. With courses such as Creative Computing, Games Computing, Music Computing and Digital Arts Computing, as well as the traditional Computer Science, you can be sure that the attendees of this hackathon will be a different demographic to usual UK student hackathon attendees.

Your company has been hand-selected by our organisation committee because we feel you share and have an interest in the creativity that Goldsmiths students have to offer. Goldsmiths is a world class institute for creative technology, whether you're in it for recruitment, marketing, or product feedback, Goldsmiths students have the creative streak that you need access to.

Furthermore we're aiming to have around 100 hackers attend the event!
